## Ocuco Acquires EMRlogic Software

*Leo Mac Canna, CEO, Ocuco Group*

Ocuco has acquired Vancouver-based EMRlogic, provider of the ODPro Practice Management System (PMS) and activEHR certified Electronic Health Record (EHR) software systems. Ocuco is the global software company behind Innovations Lab Management System (LMS) and the Acuitas Practice Management System (PMS).

"We're very excited to have acquired a great, US-certified, EHR product," said Leo Mac Canna, CEO of Ocuco (pictured). "But we are also very happy to have found such a great software team, and an excellent customer base to complement our own."

"Since rolling out Acuitas in the US to a Group in Northern California last December we have been seeking to establish a major support base in the U.S. Pacific time zone, and grow our team to better support the North American optical retail software market. We already have a strong presence in Canada with FYidoctors, and many Canadian independents have already chosen our Acuitas PMS software."

Troubled EMRlogic had been under protection from its creditors for some months. A settlement has been reached and the acquisition saves most of the jobs in the company and a future for the product.

Ocuco will honor all software support contracts. EMRlogic's Electronic Health Record (EHR) software product (activEHR) will be enhanced under the new owner for Stage II Meaningful Use requirements.

ODPro will be discontinued and replaced by Acuitas, Ocuco's world class PMS. While development on ODPro will be frozen, critical bugs will be fixed. Support will be provided on ODPro until two years after a like-for-like replacement has been released to market.

"We are delighted to provide a safe home with Ocuco for our customers and staff who have invested so much with us over the past few years" said John McCormick, owner of EMRlogic.

Almost all of EMRlogic's staff will be retained to form the core of Ocuco's new North American retail software support team. The location has the advantage of being eight hours offset from Dublin, an advantage to a software company with the long-term goal of providing follow-the-sun support to a global customer base.

Ocuco already has an office in the US developing and supporting the Innovations LMS under Robert Shanbaum and the acquisition brings total Ocuco staff worldwide to 132 across eight countries, with over 7,200 optical sites in 35 countries using its software. Ocuco will be exhibiting at Vision Expo East, New York, March 28 - 30, 2014, Booth No. MS6303.

## About Ocuco

- Ocuco is the leading optical software supplier in Europe.
- Ocuco has a rapidly expanding customer base in North America.
- Over 7200 sites using Ocuco software worldwide.
- Over 130 staff in 8 locations worldwide.

Ocuco provides PMS and LMS solutions to independent optical practices, medium sized groups, large chains, optical labs and ophthalmology clinics.

Ocuco also develops and markets the widely acclaimed Lab Management software Innovations.

Ocuco has optical retail software systems installed in the US, Canada, the UK, France, Italy, Spain, Sweden and Mexico.

Founded in Dublin in 1993 by now Group CEO Leo Mac Canna, Ocuco is a pioneer of software solutions for optical retail. The company was launched internationally in 1999 and is today one of the most influential global players in the optical software market.

## About EMRlogic

EMRlogic is a privately held company based in Greater Vancouver, Canada and is dedicated to providing innovative practice management and electronic health records software products to optometrists throughout North America.

The flagship product, activEHR, is built to support the initiatives defined by US Health Care Reform; it was ONC certified by the Drummond Group. The goal was to provide an intuitive EHR that meets the needs of optometrists to see more patients, improve care and lower costs, while also meeting the requirements of connected care and health care reform.

As the future of health care is all about changing the way doctors use technology, EMRlogic maintains a staff of highly qualified doctors, developers, and application specialists, all of whom collaborate to develop and deliver highly products and services.
