### **EMR*logic* Launches ImageManager for OD Professional™ EHRs - Optimize Workflow, Views and Sharing from Diagnostic Equipment**

*Seamlessly integrated EHRs with image file management and telemedicine reports drive best-practice results across a growing network of healthcare professionals.*

**Atlanta, GA – February 24, 2007.** EMR*logic* today announced the general availability of ImageManager, a comprehensive image management and telemedicine solution for optometrists and their local network of healthcare professionals. With ImageManager, ODs can boost efficiency and quality of care within their offices as well as electronically connect with a growing network of healthcare professionals to expand the medical dimension of the care they provide. ImageManager is an enhanced version of Image Consultant that seamlessly integrates with the ActionManager practice management solution to fulfill the increasing demand for the portability of Electronic Health Records (EHRs).

“The new EHR regulations and legislation coming out of Washington is driving change across healthcare,” says Dr. James Grue, President & CEO of Image Consultant. “Electronically portable patient records are becoming a pressing issue for Eyecare providers and more broadly across the entire medical community. Image Consultant addresses that need but I still see an industry-wide lack of integration between this type of solution and practice management software. That’s why we have partnered with EMR*logic*. ImageManager will be a seamless interface between the two; OD Professional is well ahead of the curve in all that concerns electronic communications.”

“As well as positioning the optometrist to exchange patient health information electronically with other health care providers, ImageManager offers flexibility for viewing images and diagnostic test results in each exam room,” adds Alistair Jackson, VP Sales & Marketing for OD Professional. “It creates a cost effective and efficient solution versus purchasing separate networking capabilities for each diagnostic instrument. ImageManager allows optometrists to network all results and view all images and test results from one place, seamlessly integrated with OD Professional EHRs.”

ImageManager is a separately-charged license option to OD Professional release 5.0.

#### **About EMR*logic***

Headquartered in Vancouver, Canada, with offices throughout the United States, EMR*logic* Systems, Inc. is the provider of OD Professional™ practice management software.
