

EMRlogic Systems Inc.

We are the leading software provider in our field and our products help clients build Eyecare practices and stores that provide superior care to their patients & customers. We are unique as a privately held software company comprised of highly talented staff focused on innovation to provide our clients with excellence in products and services.

Position: Application Tester

The EMRlogic Client Services team has an immediate need for a **self-motivated Software Tester** with strong analytical skills. Your primary responsibility in this position will be to work closely with QA Analyst to thoroughly test our application and help develop automated testing mechanism. Initially reporting to the VP Client Services your responsibilities may expand based on our growth and your own performance.

Responsibilities include:

- Perform regression testing and write test plans and test cases
- Develop test scripts and ensure that test plans thoroughly cover all product requirements and use cases
- Enter issues in the defect tracking system and track results
- Set up, configure, and maintain test lab configurations to support various test scenarios and environments
- Support beta and field testing sites and gather feedback
- Help Implement an automated testing tool
- Report QA status to keep project stakeholders informed on deliverables and timelines
- Help ensure a high level of Quality Control (QC) for all deliverables. Proactively learn about our product, end-user requirements, and the optometric/optical domain

Requirements:

- At least two years of previous experience in working in a similar role with good references
- Exposure to client/server technology and workflow-based application solutions
- Previous experience in implementing test automation tools
- Ability to work in fast-paced and team-oriented environment with competing priorities
- Ability to perform end-to-end application testing on daily basis and work after hours and weekends for special project
- Exposure to healthcare application and Cache` database will be a valuable asset
- Pass our entrance tests
- A bachelors degree from a recognized institution

Response Information:

If you think that you are an excellent fit, we are very interested to meet you.
